On-Page SEO Results

Your On-Page SEO could be better

Your page has some level of On-Page SEO optimization but could be improved further. On-Page SEO is important to ensure Search Engines can understand your content appropriately and help it rank for relevant keywords. You should ensure that HTML Tag Content is completed correctly and align text content to target keywords.

Title Tag

You have a title tag, but ideally it should be shortened to between 50 and 60 characters (including spaces).

UI Guy | Peter Benoit - UI Developer & Design Systems Engineer

Length : 66

Title tags are very important for search engines to correctly understand and categorize your content.

Meta Description Tag

Your page has a meta description tag however, your meta description should ideally be between 120 and 160 characters (including spaces).

Peter Benoit is a UI Developer & Design Systems Engineer specializing in creating intuitive, accessible and performant user interfaces. Explore portfolio projects, tools, and open source contributions.

Length : 205

A meta description is important for search engines to understand the content of your page, and is often shown as the description text blurb in search results.

SERP Snippet Preview

This illustrates how your page may appear in Search Results. Note, this is intended as a guide and Search Engines are more frequently generating this content dynamically.

Usability

(/)

Your usability is good

Your page is mostly usable across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web traffic comes from these sources.

Google's Core Web Vitals

Google is indicating that they do not have 'sufficient real-world speed data for this page' in order to make a Core Web Vitals assessment. This can occur for smaller websites or those that are not crawl-able by Google.

Use of Mobile Viewports

Your page specifies a viewport matching the device's size, allowing it to render appropriately across devices.

Google's PageSpeed Insights - Mobile

Google is indicating that your page is scoring poorly on their Mobile PageSpeed Insights evaluation.

Note that this evaluation is being performed from US servers and the results may differ slightly from an evaluation carried out from Google's PageSpeed Web Interface as that reporting localizes to the region in which you are running the report.

Google has indicated that the performance of a webpage is becoming more important from a user and subsequently ranking perspective.

JavaScript Errors

Your page is not reporting any JavaScript errors.

HTTP2 Usage

Your website is using an outdated HTTP protocol.

We recommend enabling HTTP/2+ or protocol for your website as it can significantly improve page load speed for users.

Optimize Images

All of the images on your page appear to be optimized.

Minification

All your JavaScript and CSS files appear to be minified.

Deprecated HTML

No deprecated HTML tags have been found within your page.

Inline Styles

Your page appears to be using inline styles.

Inline styles are an older coding practice and discouraged in favor of using CSS style sheets, due to their ability to degrade page load performance and unnecessarily complicate HTML Code.
